Technical Skills

- Java
- Spring Boot
- Python
- Jenkins
- kubernetes
- AWS
- Kafka
- Docker
- Git
- SQL
- Jira
- Angular.js

Certifications

- AWS Certified Cloud Practitioner (08/2022)

Academic Coursework

Computer Science

- Compilers
- Artificial Intelligence
- Functional Programming
- Theory Of Algorithms
- Theory Of Computation
- Data Structures and Databases
- Networks and Operating System
- C++ and Machine Learning
- Network and Internetwork Security

Applied Statistics

- Applied Statistics
- Statistical Theory
- Operational Research Techniques
- Analytics

About

Junior java developer with 1 year of experience in designing, building, and configuring applications to meet business processes and application requirements. Adept in developing and maintaining scalable applications, deployment and testing.

Education

2018 - 2021

BSc Computer Science *University Of Cape Town, Cape Town*

Specialisation: Computer Science Major

Specialisation: Applied Statistics Major

Work Experience

02 Feb 2022 - present

Application Developer Associate *Accenture, Mauritius*

As an application developer associate at accenture my main task involves:

- Designing, building and configuring applications to meet business process and application requirements accross a major Corporate Investment and Banking Information System.
- Monitoring and maintenance of Financial IT softwares together with high-quality support team to ensure proper running of application under BAU.
- Developing web-based applications using Angular, Java and RESTful APIs.
- Setting up CI/CD pipelines and deploying applications in kubernetes.
- Working in an Agile environment and collaborating with cross-functional teams including business analysts, designers, and testers.

20 Jan - 26 Feb 2021

Trainee *Mutual Aid, Mauritius*

During my traineeship at the Mauritius Civil Service Mutual Aid Associated Ltd, I:

- Undertook preventive maintenance through a checklist for network devices, servers, antivirus reports, databases and memory usage.
- Configured IP addresses on PCs and installed related drivers.
- Monitored windows updates on PCs; attended to issues raised on helpdesk related to PCs and other peripherals.
- Undertook data comparison using excel features; and ran SQL queries to extract data from databases.

Mathematics

- Cryptography
- Calculus

Others

- Geomatics
- Introduction to Earth and Environment Sciences
- Financial Accounting
- System Analysis

Languages

- English
- French

Projects

29 March - 3 Nov 2021

Transformer Neural Machine Translation for Nguni Languages

As part of my research project, in order to address the low perfomance issue with Nguni languages in the machine translation paradigm, I trained different transformer neural machine translation models for the IsiXhosa and IsiZulu language using two different data augmentation techniques and compared their performance with a baseline model. The first technique involved leveraging target-side monolingual data to augment parallel data via back translation while the second technique involved training a multilingual model on a joint set of bilingual corpora containing both the IsiXhosa and IsiZulu language.
By training different models and comparing their performance in terms of their BLEU scores I was able to determine the best performing model and the data augmentation technique used to achieve this result. It was found that both data augmentation techniques result in an improvement in BLEU scores over the baseline model.

Used: Fairseq (Sequence modeling toolkit), Pytorch

22 Aug - 17 Oct 2020

DanceIT

A three-person team project aimed at enhancing the user experience for searching African dance videos on the internet. Our solution involved developing an Android Application that functions as a personalised and intuitive searchable library for a video sharing site. We implemented a tag management system to improve the accuracy of video searches, making it easier for users to find more relevant content. This resulted in a user-friendly platform that makes it easier for users to find and share African dance videos on the internet.

Used: Android Studio, Java, Firebase, YouTube API.
